

Student Assembly R. 29: Student Supported Net-Print Improvements

*Sponsor: Matthew Henderson
Propose on November 18th, 2013*

- 1 Whereas, Cornell University is committed to improving sustainability on campus;
2
3 Whereas, a total of 9,040,206 sides were printed using Cornell Information Technologies Net-
4 Print service in the previous fiscal year;
5
6 Whereas, Net-Print was created to reduce unnecessary printing through usage pricing, while
7 offering quality service at low rates to users;
8
9 Whereas, students, faculty, and staff lack an economic incentive to print using double-sided as
10 opposed to single-sided printing under the current pricing structure;
11
12 Whereas, the default setting is not always double-sided when printing from lab computers and
13 personal computers that use the Net-Print software;
14
15 Be it therefore resolved, that CIT pursue and achieve the capability for a price differential
16 between single-sided and duplex printing as it relates to upcoming software changes;
17
18 Be it further resolved, that the CIT Labs and other departments that use Net-Print enact
19 reduced rates for double-sided printing, as the option becomes available, in order to encourage
20 duplex printing and reduce the costs to users (i.e. pricing at \$.09 for the front side and \$.07 for
21 the back side of a page, as opposed to \$.09 per side);
22
23 Be it further resolved, that CIT work to ensure that double-sided printing is selected by default
24 when using the Net-Print software from lab computers and personal computers;
25
26 Be it finally resolved, that this resolution is forwarded to CIT's Net-Print Division, and that all
27 departments which have their own Net-Print printer(s) are encouraged to implement and
28 maintain the recommendations identified in the attached department letter.
29
